

LA GALA CONSTRUCTION / Tilt Patchers, Inc.

Concrete Restoration · Waterproofing · Fall-Protection & Compliance

FL General Contractor CGC059211 · in partnership with Universal Engineering Sciences (UES)

Book Your FREE Walking-Surface Assessment

“Know where you stand — before an inspector does.”

What you get

- A no-obligation walkthrough of your property by a licensed Florida GC.
- An inspection against the OSHA Subpart D checklist (§1910.22–.30).
- A written summary of findings you can keep in your compliance file.
- A clear, priced scope to correct anything flagged — self-performed by La Gala.

What we check (preview)

- **§1910.22 General surfaces** — clean, dry, slip-resistant, in good repair; drainage and standing water
- **§1910.25 Stairways** — riser/tread geometry, handrails and stair-rail systems
- **§1910.27 Rope descent & anchorages** — 5,000-lb written certification, annual inspection, 10-year re-test (UES-sealed)
- **§1910.28/.29 Fall protection** — unprotected edges ≥ 4 ft, holes/skylights, guardrail strength criteria

Why now

The general-industry fall trigger is just 4 feet, and an uncorrected hazard — a spalled walkway, an unprotected edge, an uncertified anchor — is a documented liability the moment an inspector or an attorney finds it. The assessment is free; knowing is priceless.

Schedule your free assessment this week.
