

STRATEGIC WEBSITE AUDIT

Collaborative Concept

Complete Site Architecture, Messaging and Page-by-Page Redesign

Two focused divisions. One accountable Florida operator.

Prepared for Danny Bivins
August 14, 2026

EXECUTIVE DECISION

The company should be organized around two divisions

Collaborative Concept is not a one-service company, and the redesign should not pretend otherwise. The strategic problem is not breadth; it is the absence of a clear hierarchy. The new site should present two unmistakable divisions, then place every service, venture, tool and proof point underneath the correct division.

DIVISION	WHAT IT DOES	WHO IT SERVES
Development	Sources, underwrites, structures and coordinates real-estate development opportunities.	Property owners, capital partners, developers and builders.
Solutions	Recovers revenue, improves sales execution and builds practical operating systems.	Contractors, property operators, HOAs and service businesses.

Recommended master message
We develop properties and build solutions that move businesses forward.

What changes immediately

- Development and Solutions become the two dominant choices in the header and homepage.
- Madeira Beach remains the flagship development proof, but investor mechanics move deeper into the funnel.
- The Solutions division leads with revenue and operational outcomes, not a catalogue of software features.
- Solar Exit, Palm Beach Wake Boats, Adometr and other ventures appear as selected ventures or case studies, not equal corporate service lines.
- Roofing, permitting, portals, CRM and automation become capabilities within Solutions.

CURRENT-STATE AUDIT

The current site has strong proof but weak hierarchy

The live site contains legitimate experience, projects, tools and ventures. Its weakness is presentation: a first-time visitor must sort through development deals, investor terms, construction trades, custom software, roof consulting, solar-loan relief and unrelated ventures before understanding the company.

CURRENT AREA	PRIMARY ISSUE	REDESIGN ACTION
Homepage /	Four lines of business compete with trades, metrics and venture links.	Replace with two-division choice and two proof stories.
Projects /properties	Development, GC track record, roofing and solar consulting share one page.	Make this a pure Development portfolio and pipeline page.
Solutions /solutions	A long product wall makes the company resemble a software marketplace.	Lead with business outcomes, flagship offer and three case studies.
Investor /invest	Valuable diligence appears before trust and fit are established.	Retain as a deep project page; simplify entry and gate detailed documents.
Team /team	The operator/GC relationship is clear, but the page is development-only.	Explain Danny across both divisions and clarify partner roles.
Blog /blog	Several unrelated topic clusters dilute authority.	Create two hubs: Development Insights and Solutions Insights.
Contact /contact	One generic inquiry path does not route different needs.	Use division-first intake with Development and Solutions paths.
Ventures and sub-sites	Venture links in the corporate footer look like equal services.	Group beneath Selected Ventures with explicit independence.

Top experience problems

- Too many competing promises above the fold.
- Repeated statistics without enough prioritization.
- Long pages with insufficient progressive disclosure.
- Services, products, case studies and ventures use the same visual weight.
- Navigation labels such as Project Management and Operation Solutions do not describe the two actual divisions cleanly.
- Calls to action change too frequently instead of guiding users to one next step per division.

Recommended complete sitemap

LEVEL 1	LEVEL 2 / TEMPLATE	PURPOSE
Home	Two-division overview	Explain the company in under ten seconds.
Development	Overview	Explain sourcing, underwriting, structuring and execution.
Development	Projects & Pipeline	Show flagship, active concepts and partner track record.
Development	Project Detail	Present one opportunity, numbers, plan, team, risks and CTA.
Development	Investor Inquiries	Qualify interest and provide controlled access to materials.
Solutions	Overview	Lead with revenue recovery and operational clarity.
Solutions	Revenue Recovery Sprint	Sell the low-friction flagship engagement.
Solutions	Systems & Automation	Explain CRM, portals, permitting and software as tools.
Solutions	Case Study Detail	Show problem, intervention and measurable outcome.
Selected Work	Filter by Development / Solutions / Ventures	Centralize proof without mixing it into service pages.
About	Operator, partners and approach	Build trust and clarify accountability.
Insights	Development / Solutions	Organize thought leadership by division.
Contact	Division-first intake	Route qualified inquiries correctly.

Header navigation

Development | Solutions | Selected Work | About | Insights | Start a Conversation

Homepage

Page job

Explain the two divisions immediately, establish credibility, and route visitors without listing every capability.

Recommended hero

Eyebrow: FLORIDA DEVELOPMENT + BUSINESS SOLUTIONS

We build opportunities—properties on one side, business solutions on the other.

Collaborative Concept helps Florida owners, operators and investors move complex opportunities forward through disciplined development and practical operating solutions.

Primary CTA: Explore Development Secondary CTA: Explore Solutions

Homepage section order

- Two-division split: Development and Solutions, each with one sentence and one image.
- Two proof stories: Madeira Beach Double-Lot and the \$5,200-per-month operating-system savings case.
- How Danny works: direct access, disciplined execution and specialist partners.
- Selected work: no more than four projects on the homepage.
- Final CTA: Tell us what you are trying to move forward.

Remove from homepage

Remove the all-trades grid, detailed investor structure, product counts, long venture list and multiple competing CTAs. The homepage should explain the company, not prove every claim at once.

Development overview

Page job

Make the development division feel focused, investable and execution-capable without turning the page into a securities deck.

We find the opportunity, prove the plan and stay through execution.

From sourcing and feasibility through construction coordination and exit, Collaborative Concept brings the deal discipline and local relationships required to move Florida projects forward.

Section order

- What we develop: coastal residential, adaptive reuse and value-add opportunities.
- The development process: Source → Underwrite → Structure → Build → Exit.
- Flagship project: Madeira Beach Double-Lot.
- Pipeline preview: three opportunities maximum, with status labels.
- Execution partnership: Danny leads the deal; licensed partners execute regulated work.
- Investor CTA: Review the opportunity or request the project folder.

Design direction

Use premium coastal photography, architectural drawings, generous white space and restrained financial callouts. Avoid a wall of projections. Put detailed economics on the project page.

Projects & pipeline

Page job

Display development work only. Consulting services and unrelated ventures do not belong here.

Recommended hierarchy

SECTION	CONTENT
Flagship	Madeira Beach Double-Lot with status, location, concept and one primary CTA.
Active concepts	Concise cards for qualified development concepts; no inflated volume claims.
Partner track record	Clearly labeled as La Gala Construction partner work, not Collaborative Concept-owned projects.
Pipeline access	A gated partner area for detailed opportunities, documents and underwriting.

Project card standard

Every card should show: project name, location, project type, status, one image, one-sentence thesis and one CTA. Financial projections should appear only when supported and clearly labeled as projections.

Move elsewhere

Move roof consulting and Solar Exit content to Solutions or Selected Ventures. Their presence on the current project page confuses the meaning of “Projects.”

Madeira Beach / investor project page

Page job

Convert qualified interest into a serious conversation while preserving diligence, legal clarity and risk disclosure.

Two lots. Two homes. One disciplined execution plan.

Section order

- Opportunity summary and current status.
- Site and concept imagery.
- Headline economics with clear projected/underwriting labels.
- Development plan and staggered-build rationale.
- Capital structure and draw controls.
- Team and responsibilities.
- Risk factors and mitigations.
- Request investor folder / schedule conversation.

Critical corrections

- Do not imply guaranteed returns or completed performance.
- Do not describe a rollover as tax-free without qualified tax/legal support.
- Clearly separate Collaborative Concept responsibilities from licensed GC responsibilities.
- Keep detailed operating agreements and diligence documents behind a qualified-request step.

Solutions overview

Page job

Show that Collaborative Concept solves revenue and operational problems. Software is a delivery mechanism, not the headline identity.

Recover lost revenue. Fix the process. Build the system.

We help contractors and property operators recover opportunities already inside the business, improve sales follow-through and replace disconnected workflows with practical systems their teams can use.

Three solution lanes

LANE	PROMISE	EXAMPLES
Revenue Recovery	Turn aged leads, unsold estimates and old customers into an active sales pipeline.	Database reactivation, call lists, campaigns, follow-up.
Sales Execution	Create ownership, response standards and measurable follow-through.	Scripts, scorecards, call tracking, estimate conversion.
Operating Systems	Replace disconnected tools and manual work with one usable workflow.	CRM, portals, permitting, reporting and automation.

Page section order

- Revenue problem and diagnostic questions.
- 30-Day Revenue Recovery Sprint.
- Recover → Convert → Compound → Amplify framework.
- Roofing-system case study with \$5,200 monthly savings.
- Three selected system examples.
- Simple engagement options and one CTA.

Revenue Recovery Sprint

Page job
Provide one concrete, low-friction starting offer instead of asking a prospect to buy an entire custom system.

You already paid for the leads. We help you make them pay you back.

Offer structure

PHASE	WHAT HAPPENS	DELIVERABLE
Diagnose	Review CRM, estimate history, response speed and sales ownership.	Revenue-leak map.
Recover	Rank aged leads, unsold estimates and prior customers.	Prioritized opportunity list.
Convert	Launch scripts, sequences and call blocks.	Campaign and execution plan.
Measure	Track contact, appointments, estimates and closed revenue.	Scorecard and next-step recommendation.

Primary CTA

Find My Revenue Leaks

Proof requirement

Use actual baseline, activity and revenue figures when available. Do not substitute generalized software savings for recovered-revenue results unless the distinction is explicit.

Systems, software and automation

Page job

Give technical buyers enough proof without repeating the current eleven-product wall.

Recommended opening

Technology built around the way your business actually works.

Once the revenue and workflow problem is clear, we build only the systems needed to solve it—without forcing the team into another oversized subscription stack.

Feature only three systems above the fold

- Contractor CRM: lead-to-job visibility, estimates, files and follow-up.
- Permit Packet Builder: jurisdiction-ready document organization and automation.
- Owner / HOA Portal: phased communication, documentation and payment visibility.

Secondary portfolio

Place remaining tools in a filterable “All Systems” library. Each entry should link to a case study with problem, user, workflow, result and ownership model. Avoid long feature inventories on the landing page.

Pricing simplification

Show two engagement paths: Fixed-Scope Build and Performance-Aligned Engagement. Present optional support after the project; do not make three pricing cards compete with the core outcome.

Selected work and case-study template

Page job

Provide one organized proof library across both divisions without blending services into the navigation.

Filters

All | Development | Solutions | Ventures

Case-study template

- The situation: what was happening and for whom.
- The constraint: money, time, compliance, data or execution problem.
- The response: what Collaborative Concept actually did.
- The result: measurable outcome or current status.
- The boundary: partner responsibilities, projections and limitations.
- The next step: one relevant CTA.

Priority case studies

CASE STUDY	DIVISION	PRIMARY PROOF
Madeira Beach Double-Lot	Development	Sourcing, underwriting and execution plan.
Roofing Operating System	Solutions	Six subscriptions consolidated; \$5,200 monthly software savings.
Permit Packet Builder	Solutions	Structured permitting workflow across many jurisdictions.
HOA / Owner Portal	Solutions	Resident communication and phase visibility.
Solar Exit	Venture	Focused consumer documentation and coordination platform.

About and team

Page job

Build trust in Danny as the accountable operator while accurately describing specialist and licensed partners.

Direct accountability across development and solutions.

Danny Bivins leads Collaborative Concept across opportunity sourcing, business development, project coordination and operating-system design. Each engagement is supported by the licensed, technical or execution partners appropriate to the work.

Recommended sections

- Danny's background and role across both divisions.
- How the operator model works: direct access, clear ownership and specialist partners.
- Development execution relationship with La Gala Construction.
- Solutions delivery approach and representative systems.
- Licensing and scope boundaries stated plainly.

Naming consistency

Choose one public brand form—"Collaborative Concept" or "Collaborative Concepts"—and apply it consistently to the logo, page titles, legal footer, email signatures and structured data.

Insights and article templates

Page job

Build search authority without making unrelated industries appear to be equal corporate services.

Two primary insight hubs

HUB	TOPICS
Development Insights	Coastal redevelopment, underwriting, FEMA considerations, construction planning and investor education.
Solutions Insights	Lead reactivation, sales follow-up, contractor operations, CRM ownership, permitting and portals.

Venture content

Wake-boat, Adometr and Solar Exit articles should live on their own venture properties or be explicitly labeled as Venture Insights. Do not mix them into the main corporate article feed by default.

Article page standard

- Clear topic category and audience.
- Short answer near the top.
- Useful supporting sections with descriptive headings.
- Author/reviewer and updated date where expertise matters.
- One division-specific CTA—not a generic contact prompt.
- Internal links only to closely related content.

Contact and inquiry routing

Page job

Help visitors choose the correct division and collect enough information for a useful first conversation.

What are you trying to move forward?

First choice

PATH	FORM FIELDS
Development inquiry	Name, contact, property/location, opportunity type, control/status, capital need, timing and document upload.
Solutions inquiry	Name, company, business type, primary problem, current CRM/tools, lead volume or workflow, monthly cost and desired outcome.

Contact experience requirements

- Keep Danny’s phone number visible for direct contact.
- Use one primary submit action after the visitor chooses a division.
- Confirm what happens next and expected response time.
- Use clear consent language only when calls/texts or automated outreach are involved.
- Do not ask investor accreditation questions until relevant to the opportunity.

Venture and sub-site policy

Page job

Preserve the value of ventures without allowing them to blur the corporate promise.

Recommended treatment

PROPERTY	CORPORATE ROLE	SITE TREATMENT
Florida Solar Exit	Focused Solutions venture	Independent brand/site; one concise venture case study on corporate site.
Palm Beach Wake Boats	Venture	Independent brand/site; remove from primary corporate navigation.
Adometr	Venture / product	Independent brand/site; present as selected work only.
K5 and partner properties	Partner / development proof	Clearly identify ownership and partner relationship.
Specialized compliance sites	Solutions deployment	Use as case study; keep market-specific conversion site separate.

Footer treatment

Add a restrained “Selected Ventures” link in the footer. Do not list every venture beside Development and Solutions. Every venture page should state the relationship to Collaborative Concept and any licensing, transaction or referral boundary.

One visual system across both divisions

TOKEN	RECOMMENDATION	PURPOSE
Base	Warm ivory / soft white	Premium, readable background.
Primary	Deep Atlantic navy	Trust, headlines and navigation.
Development accent	Sea-glass teal	Coastal, architectural identity.
Solutions accent	Muted copper / sand gold	Operational energy without tech-startup styling.
Headlines	Editorial serif	Authority and sophistication.
Body/UI	Humanist sans serif	Readability and modern controls.
Photography	Real Florida property, field and working-session imagery	Ground the brand in actual execution.

Layout rules

- One dominant idea per section.
- Maximum reading width of approximately 680–760 px for body copy.
- Use cards only for repeated comparable items—not every paragraph.
- Avoid rounded SaaS panels, glass effects, gradients and icon overload.
- Use financial metrics sparingly and always label projections.
- Keep mobile navigation focused on Development, Solutions and Contact.

Non-negotiable implementation standards

SEO

- Unique title, description, H1 and canonical URL for every page.
- Organization, Person, Service, Article and Project schema where accurate.
- Separate internal-link clusters for Development and Solutions.
- Redirect removed or renamed URLs; do not strand indexed content.
- Use location language naturally; avoid repetitive South Florida keyword stuffing.

Accessibility

- Meet WCAG AA color contrast and visible keyboard focus.
- Use descriptive alt text for meaningful project images.
- Preserve logical heading order and keyboard-accessible menus/forms.
- Label projected figures, form requirements and errors clearly.
- Respect reduced-motion settings and avoid autoplay media.

Measurement

EVENT	WHY IT MATTERS
Development CTA click	Measures qualified project/investor intent.
Solutions audit start	Measures flagship-offer demand.
Form completion by division	Shows routing quality and conversion.
Case study engagement	Shows which proof supports decisions.
Phone/email click	Captures direct-response behavior.

Recommended build sequence

PHASE	SCOPE	ACCEPTANCE CHECK
1. Architecture	Finalize naming, sitemap, redirects and division ownership.	Every existing route has a destination.
2. Core conversion	Build Home, Development, Solutions and Contact.	Two-division message is clear on desktop/mobile.
3. Proof	Build Projects, Madeira detail and three Solutions case studies.	Claims are accurate, labeled and attributable.
4. Trust	Build About, partner boundaries and licensing disclosures.	Roles and regulated work are unambiguous.
5. Content	Rebuild Insights taxonomy and article templates.	Topics no longer compete in one feed.
6. Ventures	Move venture links to correct sub-sites/portfolio placement.	Primary navigation stays focused.
7. QA & launch	Accessibility, SEO, forms, analytics, redirects and responsive QA.	No broken routes; conversion events verified.

Recommended launch decision

Build the two-division architecture first. Do not redesign hundreds of lines of current content in place; migrate only the strongest proof into the new hierarchy.
